STAT

Dear George:

The information contained in my letter of 10 January, 1964 was partly in error. In order to project properly at the reflex viewer the frame numbering sequence and the location of the origin of coordinate axes should be as shown in the revised sketch, enclosed.

Don't bother confirming suitability of this arrangement, you are stuck with it.

Enclosed you will also find the installation form we received from you. We hope our answers are sufficiently clear; the eleven foot length would be measured after assembly.
